

# Road Conditions Assessment

## Early Known Issues:

- Pavements conditions have deteriorated, and the roadways have more than exceeded the life they were designed for
- Repair requires a full depth rebuild of pavement section
- Some roadways must be widened to meet minimum fire access standards
- Existing trees will be impacted by roadway widening
- Many blocks have no stormwater infrastructure causing localized ponding of runoff
- Opportunity to build curb extensions at intersections to improve pedestrian safety
- Need to mitigate significant construction impacts
